Art Unit: 3643

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-14, 26, 27, drawn to a remote image data processing system, classified in class 700, subclass 90.
- II. Claims 15-25, drawn to a remote image data processing system and aircraft, as well as a method for remote image detection located in an aircraft, classified in class 244, subclass 190.

The inventions are distinct, each from the other because of the following reasons: Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because a means for determining and recording a line-of-sight angle of image data relative to the image sensor is not specifically recited. The subcombination has separate utility such as use outside of an aircraft, for example, by an individual standing on elevated ground who wishes to image the surrounding terrain.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Mr. Felix J. Sahlin on 14 August 2002 to request an oral election to the above restriction requirement, but did not result in an election being made. Applicant

is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
